

Forward looking statement

This presentation may contain certain forward-looking statements and forecasts based on uncertainty, since they relate to events and depend on circumstances that will occur in the future and which, by their nature, will have an impact on Vicore Pharma's business, financial condition and results of operations. The terms "anticipates", "assumes", "believes", "can", "could", "estimates", "expects", "forecasts", "intends", "may", "might", "plans", "should", "projects", "will", "would" or, in each case, their negative, or other variations or comparable terminology are used to identify forward-looking statement.

There are a number of factors that could cause actual results and developments to differ materially from those expressed or implied in a forward-looking statement or affect the extent to which a particular projection is realized. Factors that could cause these differences include, but are not limited to, implementation of Vicore Pharma's strategy and its ability to further grow, risks associated with the development and/or approval of Vicore Pharma's products candidates, ongoing clinical trials and expected trial results, the ability to commercialize C21, technology changes and new products in Vicore Pharma's potential market and industry, the ability to develop new products and enhance existing products, the impact of competition, changes in general economy and industry conditions and legislative, regulatory and political factors.

No assurance can be given that such expectations will prove to have been correct. Vicore Pharma disclaims any obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Vicore at a glance

Unlocking the potential of a new drug class – ATRAGs

A powerful, upstream mechanism for IPF

Unprecedented data in IPF phase 2a

A clinical platform under development – capitalizing on lead

Company overview

Vision

Transform the lives of patients where modulation of the AT2 (angiotensin II type 2) receptor can play a central role in halting and reversing disease pathology

Locations

Stockholm, Sweden, Cambridge, Massachusetts & Copenhagen, Denmark

Financials

Publicly listed (Nasdaq Stockholm: VICO) with 160 million USD market cap (January 1, 2024) and 51 million USD financial position (September 30, 2023)

Key shareholders

HealthCap, HBM Healthcare Investments, Orbimed, Suvretta and Invus

Advancing a diversified pipeline

Indication	Compound	Preclinical	Phase 1	Phase 2	Phase 3	Comments
IPF	C21					Final data phase 2a, H1 2024 Phase 2b trial start H1 2024
РАН	C21					
Anxiety in pulmonary fibrosis	Almee™ DTx					Pivotal study completed
Not disclosed	C103, C111, C112					Preclinical studies / IND-enabling

IPF - a large and growing commercial opportunity

Strong market growth despite SoC shortcomings

\$2.0Bn \$2.0Bn | Some of the content of the conten

- Growth driven by increased diagnosis and treatment rate
- Limitations of current SoC slows disease progression, but significant side effects and do not improve quality of life^{1,2}

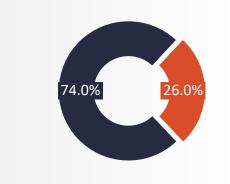

Majority of the market is not adequately addressed

Population in US and Europe

~250.000

Only ~26% of U.S patients initiate treatment³

High discontinuation rate and short time on therapy³

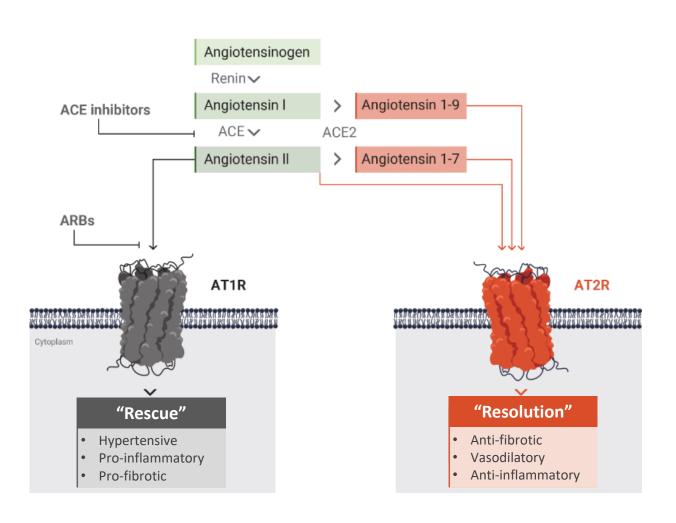

Average duration of treatment:

LO months

AT2R agonism is an upstream intervention driving tissue repair

- The Angiotensin II pathway is highly conserved with similar components across species
- Angiotensin II activates AT1R and AT2R with similar potency
- AT1R is widely expressed, while AT2R is expressed in few tissues such as the lung, but is upregulated at sites of disease/tissue injury
- AT1R effects include increase in blood pressure, a key reason for ACEi and ARB development
- AT2R activates tissue protective mechanisms including anti-fibrotic effects

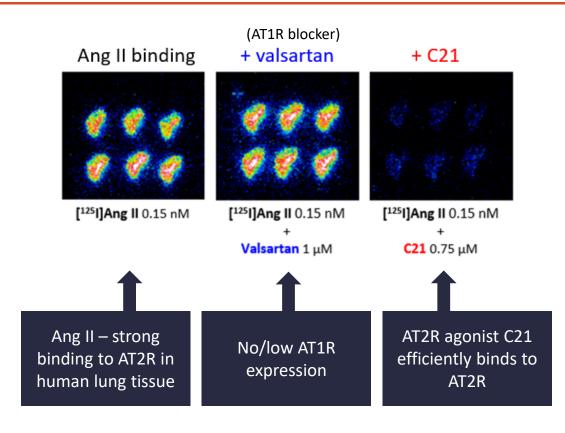

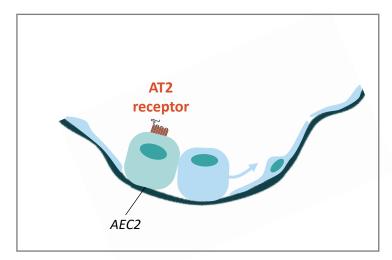

AT2R—but not AT1R—is expressed in the human lung

AT2R is selectively expressed on Alveolar epithelial cells type 2 (AEC2)

Single cell analysis shows AT2R expression selectively on AEC2 in the lung

v/core pharm

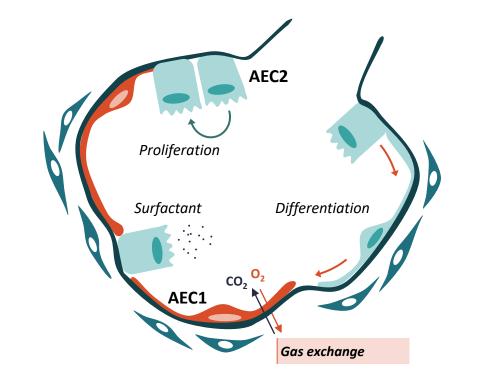

Source: (1) IPF atlas (2) Vicore data on file

- The alveolar epithelium is constantly exposed to damaging irritants in inhaled air
- AEC1 is the predominant alveolar cell type and is responsible for gas exchange
- AEC2 is a progenitor cell that is critical for alveolar integrity and function:
 - Proliferates to form new AEC2
 - Differentiates to AEC1 that need to be replaced
 - Produces surfactant to maintain alveolar integrity
- AT2R selectively expressed on AEC2

Healthy alveolus

AEC – Alveolar Epithelial Cell

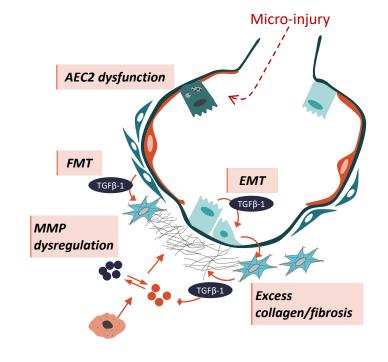

Damage to AEC2 in IPF drives disease progression

Key processes in IPF development

- Loss of functional AEC2
 - Reduces surfactant production
 - No generation of AEC1
 - Alveolar collapse and dysfunction
- TGFβ1 is released from injured AEC2 and macrophages which drives:
 - Fibroblast to Myofibroblast Transition (FMT)
 - Epithelial to Mesenchymal Transition (EMT)
 - MMP imbalance
- Excess collagen deposition results in fibrosis

AT2R activation with C21

- 1. Promotes AEC2 viability
- 2. Inhibits TGFβ1
- 3. Inhibits EMT and collagen production

C21 reduces TGFβ1 and Collagen in human IPF lung slices

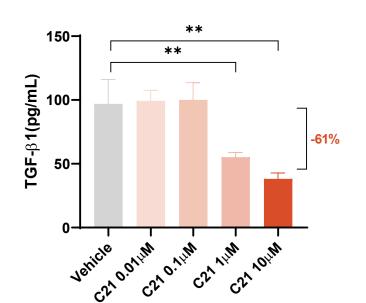

Human precision cut lung slices (PCLuS)

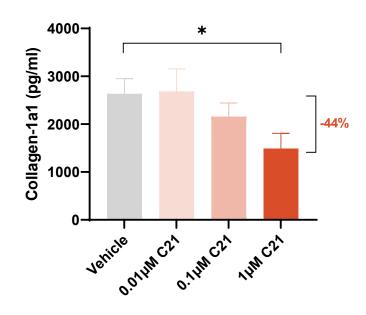

- IPF tissue collected from IPF patients undergoing lung transplant.
- Intrinsic fibrosis, no stimuli added

TGFβ1 protein levels in PCLuS

Collagen protein levels in PCLuS

Dose-dependent reduction of TGFβ1 and Collagen-1a1 protein

Data represent averages +/- SEM of of 5 separate tissue slices at each concentration, sampled after 144h exposure to C21 or vehicle

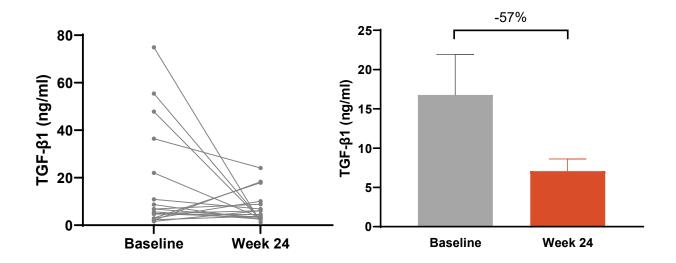

Source: Vicore data on file

Plasma TGF\u00ed1 at baseline and 24-week C21 treatment in IPF patients (AIR Interim analysis)

- 7 patients with most elevated TGFβ1 (total) at baseline all showed marked reduction
- 57% reduction of average plasma TGFβ1 week 24 vs baseline
- Average levels at week 24 in line with healthy volunteers (1)

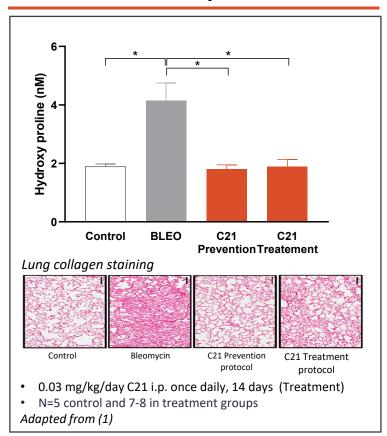

AIR phase 2a trial with IPF patients. Single plasma samples at baseline and after 24 weeks treatment with C21 (n=18). ELISA-based analysis of total TGF β 1.

Strong preclinical evidence for C21 in pulmonary fibrosis

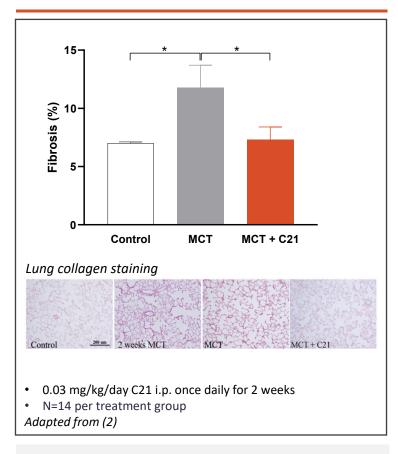

Bleomycin

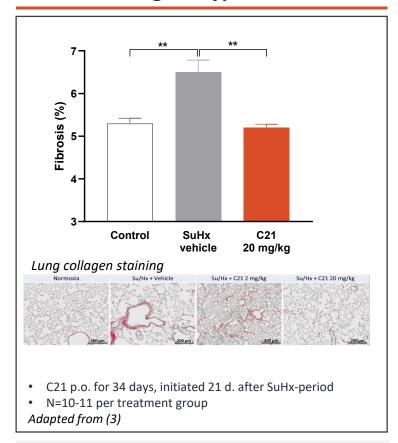

Normalized collagen synthesis and attenuation of disrupted lung architecture

Monocrotaline

Reversal of fibrosis

Sugen-Hypoxia

Reversal of fibrosis

AIR - demonstrating safety and efficacy of C21 in treatment naïve IPF patients

- Primary aim: To evaluate safety of C21, an Angiotensin II type 2 receptor agonist (ATRAG), in patients with IPF
- Secondary aim: To evaluate efficacy of C21 in IPF as measured by FVC change

Trial Design

- N=52 treatment naïve IPF patients
 - Open label single arm
 - Historical control arm
 - Centrally read HRCT scans
 - Gold standard FVC measurement
- 6-month treatment duration with a possible 3-month extension
- Systematic quality control

Better tolerability than SoC

INPULSIS 1; 52-week treatment(1)

Nintedanib Placebo n=309 n=204 AIR analysis May 2023

Good GI side effect profile

Lower than expected rate of disease progression or cough

Low rate of severe AE	S
-----------------------	---

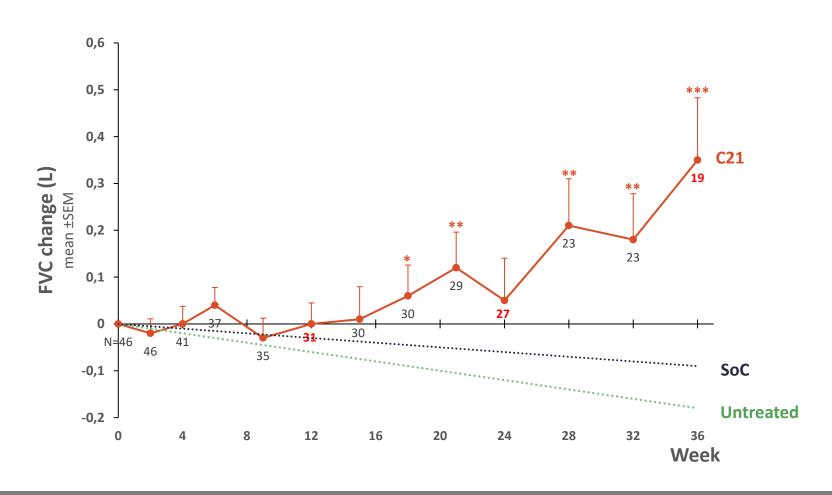

C21 caused no serious adverse events and lacks GI side effect profile

Outstanding efficacy data – stabilized FVC over 36 weeks

AIR interim analysis May 2023

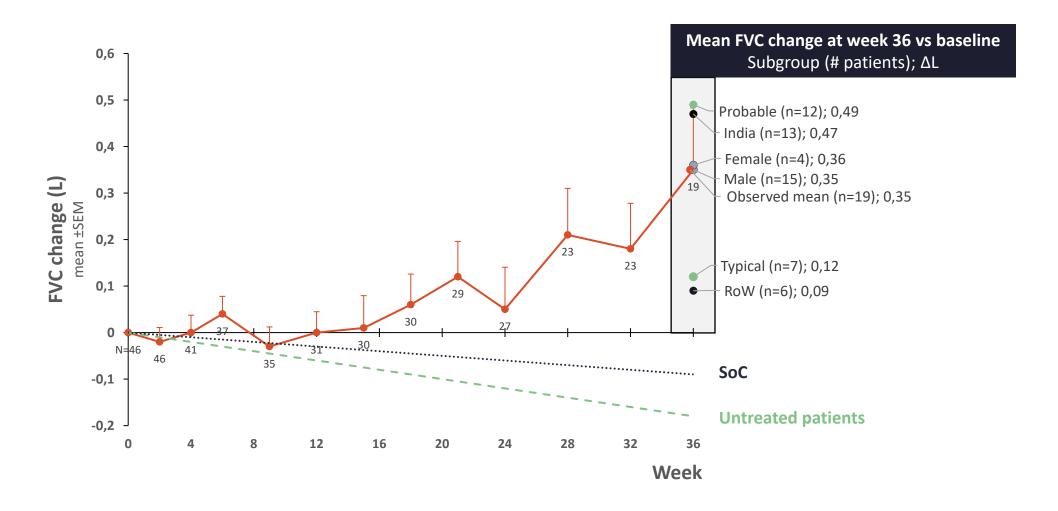

17 of 19 patients have an FVC change above the expected mean of an untreated population at 36 weeks

All subgroups show stabilization over baseline at 36 weeks

AIR interim analysis May 2023

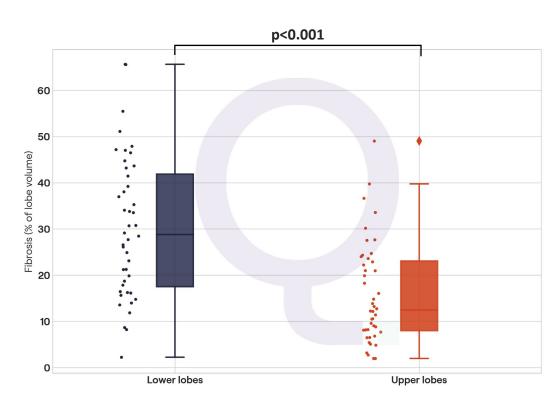

3D-reconstruction of HRCTs confirm diagnosis and FVC quality

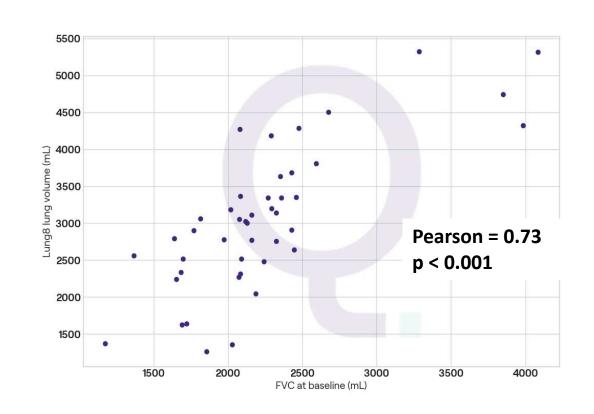

AIR interim analysis May 2023

Fibrosis pattern typical for IPF patients

Strong FVC and total lung volume correlation

- Fibrosis predominant in the lower lobes
- Additional confirmation of IPF diagnosis in AIR patients

Source: Vicore data on file

Study Characteristics

- A randomized, double-blind, placebo-controlled, parallel-group multicenter, dose-finding trial
- IPF patients on stable nintedanib/SoC or not on SoC (no access, refused, intolerant or failed)
- 52-week treatment duration; N=270 (90 per arm)
- Assessment of efficacy, safety, and pharmacokinetics at baseline as well as weeks 4, 12, 24, 36, and 52
 - Remote visits (by phone or video) to assess safety and compliance at weeks 8, 18, 30 and 44
- Primary endpoint is change from baseline in FVC at 52 weeks
- Key secondary efficacy endpoint proportion of participants with disease progression at 52 weeks

Study Design

C21 50 mg twice daily for 52 weeks; N=90

C21 100 mg twice daily for 52 weeks; N=90

Follow-up

Placebo twice daily for 52 weeks; N=90

IPF diagnosis and FVC quality confirmed by 3D reconstruction of HRCT

Continued unprecedented efficacy data

Good safety and tolerability profile – no GI signals

Supportive biomarker data

Almee™ – Digital Therapy for Anxiety in Pulmonary Fibrosis

Almee™
Integrated digital
product for patients
with PF

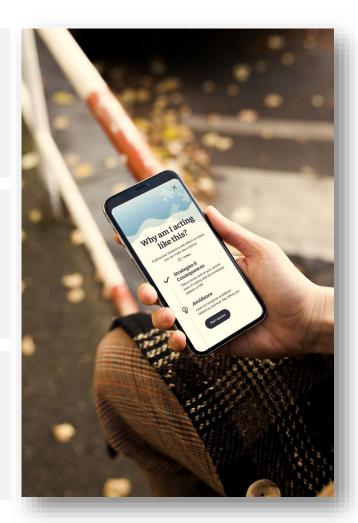

- Disease management in pulmonary fibrosis (PF essentials)
- Treatment of anxiety for eligible PF patients (dCBT-PF)

250.000 Pulmonary Fibrosis patients in the US

- 63% of patients with treatable levels of anxiety¹
- Pharmacological treatments do not improve patients' quality of life

COMPANION study demonstrated clinical validation

- US-based RCT enrolled 108 patients, completed Q4 2024
- Treatment period 9 weeks
- Significant improvement of anxiety (2.7 point reduction of GAD-7) and quality of life (6.5 point reduction of K-BILD psychological domain)

Almee™ can unlock the potential of molecular assets

Treating the psychological impact of living with PF

Moving an RCT confirmed clinical endpoint

True patient engagement – creating trust and empowerment

Increased adherence and initiation

Custom build for specific uptake issues

IP Extension

IP options with DTx / drug combinations

Data access

Generate unique real-time data

New Revenue Streams

DTx sales generation

Vicore has a platform of proprietary ATRAGS

C21 – first in class – rare lung diseases

- Market exclusivity (NCE) US 5 years, Europe 10 years
- Orphan drug status in IPF granted US 7y, EU 10 years
- Several granted and pending patents (formulation, manufacturing, use) covering C21, projected expiry beyond 2040
- NCE patent expires 2024

Follow on compounds with NCE patents to 2040 and beyond

- 7 novel proprietary classes developed
- NCE patent protection to 2040 and beyond expected
- High AT2R selectivity
- C103 in late-stage preclinical development

Strong leadership team with extensive industry experience

AHMED MOUSA CHIEF EXECUTIVE OFFICER

Experienced biotech executive with a multi-disciplinary background from law and business development

-pieris- covington

HANS JEPPSSON, PhD **CHIEF FINANCIAL OFFICER**

Cross-disciplinary background in finance and medicine. Ex Danske Bank: Equity analyst.

MIKAEL NYGÅRD, PhD VP OPERATIONS AND CORPORATE STRATEGY

Experienced healthcare Business Development executive, has led M&A and Corporate Development functions.

ELIN ROSENDAHL, MSc Pharm VP CLINICAL DEVELOPMENT

More than 20 years of global biopharmaceutical development at Pharmacia and SOBI. Solid experience of managing all clinical phases.

JOHANNA GRÄNS, PhD PROGRAM DIRECTOR, EARLY DEVELOPMENT

Extensive experience in preclinical R&D. Project management and regulatory affairs. Research experience in drug metabolism.

UNIVERSITY OF GOTHENBURG

ÅSA MAGNUSSON CHIEF ENGAGEMENT & COMMERCIAL OFFICER

More than 20 years of experience as a commercial executive in the pharmaceutical industry with focus on securing market access and launching rare disease medicines.

PROF. BERTIL LINDMARK. MD **CHIEF MEDICAL OFFICER**

Extensive industry experience in respiratory and inflammatory diseases. Ex AZ: Led the development of global brands like Pulmicort and Symbicort.

JOHAN RAUD, MD, PhD CHIEF SCIENTIFIC OFFICER

Ex AstraZeneca: Director Inflammation research. 25 years of experience in drug development. AstraZeneca 25

Chairman. Experienced venture capitalist and life science sector financier.

Board of Directors

HANS SCHIKAN

25 years management experience in global pharmaceuticals (e.g. CEO of Prosensa). Extensive board work in listed life science companies (e.g. Hansa Biopharma, SOBI and Pharvaris)

HEIDI HUNTER

President Cardinal Health Specialty Solutions. 25 years in senior pharmaceutical development and commercialization positions.

MAARTEN KRAAN

Extensive experience in biomedicine, managerial roles at AstraZeneca.

ELISABETH BJÖRK

Broad drug development experience, currently leading global late-stage development activities in CVRM at AstraZeneca. Extensive board work experience in small and mid-size international life science companies.

MICHAEL BUSCHLE

More than 25 years experience in basic research as well as biotech and pharma R&D. Extensive board work experience from US Nasdag-listed biotech firms.

NINA CARLÈN CHIEF ADMINISTRATIVE OFFICER

More than 20 years of marketing and communications experience. Responsible for HR and company administration.

JESSICA SHULL. PhD **DIRECTOR OF DIGITAL HEALTH**

More than 20 years of experience in the development and adoption of digital healthcare technologies.

SOPHIE BERTILSSON **HEAD OF CMC**

More than 18 years of experience in project management with pharmaceutical industry with focus on development and manufacturing, development and supply.

JIMMIE HOFMAN, VP BUSINESS DEVELOPMENT

Experienced Business Development and Business Analyst executive.
